S.No: 9	Exp. Name: ***Fractional Knapsack Problem***	Date:2025-09-14

Aim:

The below program has a method void knapsack(). Which takes four parameters **number of objects**, the **weight of each object**, the **profit** corresponding to each one and the **capacity of the knapsack**. Write a program using a fractional knapsack algorithm to get the maximum profit.

Print the output as follows:

```
Sample Input and Output:
Enter the no. of objects: 6
Enter the weights and profits of each object:
1 2
4 5
8 9
4 6
5 2
3 5
Enter the capacity of knapsack:10
Maximum profit is:- 15.500000
```
